AllDocs Synthetic Test

A programmatically generated PDF for round-trip validation

This document is generated by tests/fixtures/generate_synthetic.py using PyMuPDF. It contains no personal data and is safe to commit publicly. Its purpose is to exercise the AllDocs PDF importer and viewer end-to-end on a realistic but synthetic input.

The page below contains an embedded raster image (a procedurally generated 256x256 PNG) so the importer's image extraction path is exercised, not just text.

· *procedurally generated PNG (256x256)*

Page Two

Pangrams and character coverage tests

The quick brown fox jumps over the lazy dog.

Pack my box with five dozen liquor jugs.

Sphinx of black quartz, judge my vow.

0 1 2 3 4 5 6 7 8 9 ! @ # $ % ^ & * ( ) _ + - = [ ] { } ; : , .

bold sample line · emphasis works in the importer

italic sample line · and italic style is preserved
